

AIBOOMI STARTUP WEEKEND · 2026

# One health memory. Two human experiences.

Health OS turns scattered records into a calm daily routine for an older adult—and actionable, source-linked context for the family caregiver.

Local-first

AI-structured

Human in charge

# The family care gap lives between the files.

- 1 Older adults**  
Must remember medicines, appointments and instructions across disconnected records.
- 2 Family caregivers**  
Reconstruct “what changed?” from PDFs, calls, messages and memory.
- 3 Clinicians**  
Receive incomplete history and spend scarce visit time rebuilding context.

The problem is not access to another file archive.

It is continuity + the next right action.

# Same record. Different cognitive load.

Every upload becomes source-linked facts and actions; each person sees only the interface their role needs.

# AI suggests structure. The system keeps proof.

**72/72**  
expected measurements recovered

**9/9**  
document types correct

**2/2**  
episodes clustered

**Guardrails by design**

Bounded context · source links · transactional writes · causal caution · non-diagnostic observations · escalation language · human review required

Controlled, synthetic corpus only—not a clinical accuracy claim.

# Start with the person already doing the work.

## Beachhead user + buyer

### Adult child coordinating a parent’s care

Immediate pain, frequent workflow, clear willingness to pay for confidence and saved time.

## Value delivered

Less time rebuilding context. Better follow-up and medication visibility. More focused appointments. A simpler elder experience.

### 1 · Founder-led family pilots

Caregiver communities + geriatric clinics

LEARN

### 2 · B2C family subscription

Per shared care circle / month

RETAIN

### 3 · Partner distribution

Senior living + home health + care managers

SCALE

### 4 · Team workflow plan

Role-based access, audit and integrations

EXPAND

The moat is the corrected longitudinal care graph.

Not another generic health chatbot.

# Prototype today. Trustworthy care coordination next.

|                                                                                                                                                                                             |                                                                                                                                                                                      |                                                                                                                                                                        |
