

Sunrise Endocrine Clinic

Endocrinology follow-up note

Patient: Ramesh Mehta DOB: 1952-03-11 Sex: Male ID: ELD-2026-014
Encounter date: 2026-02-14

Reason for visit

Quarterly diabetes review for type 2 diabetes, hypertension, and diabetic kidney disease monitoring. Daughter reports he misses afternoon hydration and often forgets whether the lunchtime tablet was taken.

Symptoms and home history

Patient reports burning feet at night, mild numbness in toes, two episodes of dizziness before dinner in the last month, and fasting sugars often between 150 and 180 mg/dL. Blood pressure log at home is mostly 148-158 / 84-92 mmHg.

Assessment

Type 2 diabetes remains above goal. Microalbuminuria and reduced eGFR require repeat renal monitoring. Peripheral neuropathy symptoms discussed. No active foot ulcer. Encourage medicine adherence support through family-managed reminders.

Plan

Continue metformin XR and sitagliptin. Restart evening walk after dinner at least 20 minutes on five days per week. Repeat HbA1c, CMP, creatinine/eGFR, urine ACR and B12 in 8 weeks. Schedule retinal examination within 4 weeks. Review blood-pressure log with primary physician.
