

MindWell Psychiatry Centre

Psychiatry and sleep consultation

Patient: Ramesh Mehta DOB: 1952-03-11 Sex: Male ID: ELD-2026-014
Encounter date: 2026-06-10

Reason for consultation

Evaluation for persistent worry, light sleep, early-morning awakening, and reduced motivation over the last 6 months.

History

Mood is more anxious in the evenings, sleep averages 5 to 5.5 hours, and fatigue is worse after poor sleep. No psychosis, no suicidality, and no substance use reported.

Assessment

Generalized anxiety symptoms with insomnia pattern. Family support is strong and the daughter helps maintain routines.

Plan

Begin sertraline 25 mg every morning for 1 week, then 50 mg every morning if tolerated. Start sleep-hygiene routine, evening screen reduction, and breathing practice before bed.

Next appointment

Psychiatry follow-up appointment scheduled for 2026-07-09 for anxiety and sleep review.
