## Orthopaedic Consultation Note

Patient: Alex Morgan    DOB: 1991-08-14    Sex: Male    Patient ID: SYN-2025-001  
Collection / encounter date: 2025-06-05

### Chief complaint

Right ankle pain and swelling after inversion injury while playing badminton on 04 June 2025. Pain 7/10 on weight-bearing.

### Examination

Lateral ankle swelling and bruising; tenderness over ATFL and CFL. Anterior drawer mildly positive. Neurovascular examination intact. Able to bear weight for four steps with pain.

### Imaging

Right ankle X-ray AP/lateral/mortise: no acute fracture or dislocation. Mortise preserved.

### Assessment

Grade II right lateral ankle sprain.

### Plan

- Relative rest, ice 15 minutes 3–4 times daily, compression and elevation.
- Lace-up ankle brace during ambulation for 2–3 weeks.
- Medications as per separate prescription.
- Begin range-of-motion exercises after 48–72 hours, then supervised physiotherapy.
- Review in 14 days; earlier for increasing pain, numbness or inability to bear weight.
