Nutrition & Supplement Review

Patient: Alex Morgan DOB: 1991-08-14 Sex: Male Patient ID: SYN-2025-001
Collection / encounter date: 2025-09-02

Current regimen reported by patient

- Vitamin D3 2,000 IU daily — started 20 January 2025
- Omega-3 fish oil providing EPA+DHA 1,000 mg daily — started 20 January 2025
- Magnesium glycinate 200 mg nightly — started 01 February 2025
- Zinc picolinate 15 mg daily with food — started 01 February 2025
- Creatine monohydrate 5 g daily — started 01 April 2025

Review

Vitamin D, triglycerides, hs-CRP and zinc improved versus January. Creatinine and CK rose after creatine initiation and intensive resistance training; this does not establish causation. Hydration and repeat CK/renal panel after 5–7 days without strenuous exercise discussed. Avoid exceeding 15 mg/day zinc long-term without copper monitoring.

Follow-up

Repeat CMP, creatinine/eGFR, CK, fasting lipids, Vitamin D and zinc in approximately 12 weeks.
